

Research Topic	Study on regulations related to green space development in <i>Bebauungsplan</i> , Germany	Graduate School of Engineering
Host University	Technical University of Munich / Munich / Germany	Architecture, Civil Engineering and Urban Design
Duration	From September 30 to November 30 , 2019	HARUGUCHI Masahiro

## Summary of the Research Activities

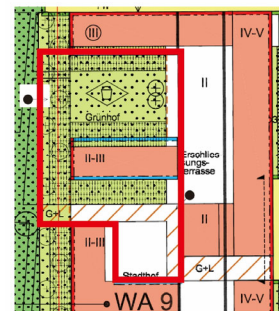

I am studying the regulations related to the development of green spaces in the *Bebauungsplan* (Building plan) in the Riem district of Munich, Germany. In Japan, the district plan was institutionalized in 1980, and at that time the West German *Bebauungsplan* was referenced.

German *Bebauungsplan* has detailed plans for greening and planting, in addition to building codes and urban planning. In Japan, on the other hand, urban planning has architectural regulations, but the regulations of greening and planting are not planned in detail.

I had already translated the regulations of the *Bebauungsplan* in the Riem district of Munich in Japan. The purpose of the research in Munich is to see in the field if the regulations are fulfilled.

## About Everyday Life

Munich city has many historic buildings and museums. In addition, there were several universities, which were full of students and young people. The Oktoberfest was held there and was crowded with many people. During my stay, Professor Thomas Bock of the Technical University of Munich prepared a seat in the laboratory. Thank you for your cooperation.

## 指導教員講評

すでに日本でドイツの地区計画の規定内容(独語)を翻訳し、その計画が実現しているかどうかを現地で確かめた調査であり、有意義な留学であった。
